Problem-solving, Learn fast, Curious, Active Listening, Teamwork, Diligent, Organized, Humor, Portuguese native speaker, Spanish, and English speaker.

PROJECTS

Next Tech Trivia
Next Tech Trivia is an interactive game for Google Cloud Next '20: OnAir. Our amazing team developed a dynamic app so the user can enjoy an awesome experience! If the user answers 4-5 questions correctly, the user can spin the wheel for a prize! This project is coded in Javascript + MERN Stack. To build a spin wheel, we applied Canvas. We also used 3 APIs: Gitfit as rewards, SendGrid to send emails to users, and Cloudinary to store images.

SmartAgenda
SmartAgenda is a web application for business owners to keep track of client information as well as appointments that are displayed on their calendar. Javascript, MERN Stack, and Mongoose were used to develop this project and used FullCalendar.io library, Moment.js, and React Date-Picker in the frontend. This project is under continuous improvement for the next releases.

Easy Weather
Easy Weather is a React app that pulls weather information from WeatherAPI.com. Javascript, Express, and Node.js were used to develop this project. To manipulate date and time we used Moment.js and to stylize we used React Bootstrap, such as Button and Cards to display the forecast. Also, we used a typewriter effect on the home page, handling CSS properties to display it.

EXPERIENCE

Full Stack Web Developer Wyncode Academy I April 2020 - June 2020
- **Client-side:** Trained in JavaScript, CSS, HTML, web frameworks and libraries, such as React.js, Bootstrap, React Bootstrap, Moment, and FullCalendar.io; and experience using APIs.
- **Server-side and database:** Trained in setting the backend environment utilizing MERN stack (MongoDB, Express, React, and Node.js).
